## OMRON

1

### NS Series

### Network

Provides serial NT Link communications supporting both 1:1 and 1:N connections. The NT Link has more efficient communications than Host Link and its capabilities are especially apparent in applications with multiple PTs connect to the PLC. The NS-series PTs can also support communications with multiple PLCs and multiple NS-series PTs through Controller Link and Ethernet connections, so the network can be configured freely to match the requirements and scale of the application. In addition, using the NS-Runtime makes it possible to monitor machine status and log data from the host.

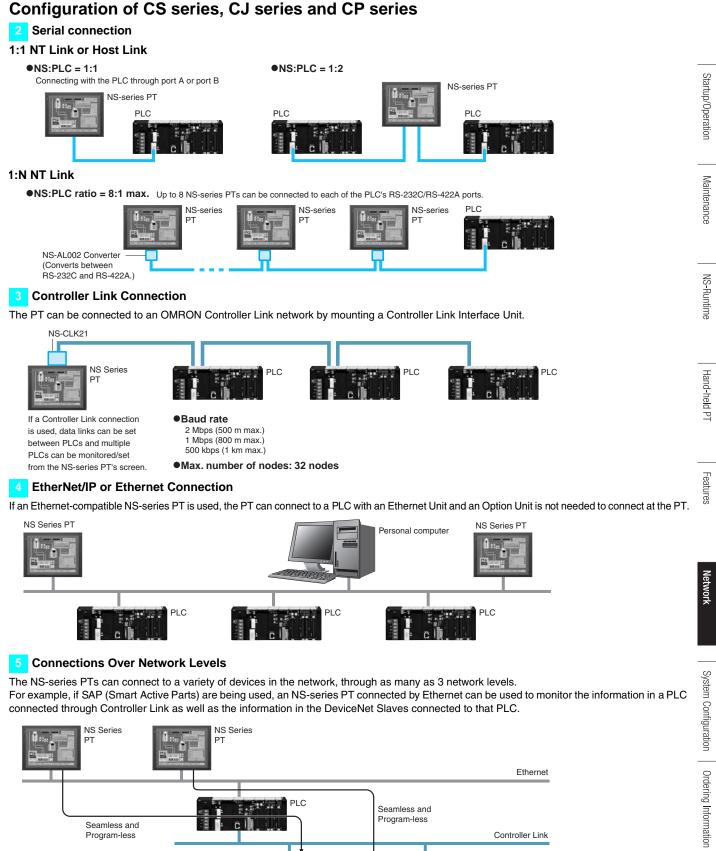

## Configuration of CJ2 series and NJ series

### 1 EtherNet/IP Connection (Tag accesses)

If an Ethernet-compatible NS-series PT is used, the PT can connect to a Controller with built-in EtherNet/IP and an Option Unit is not needed to connect at the PT.

\*1.NS5-TQ series (high luminance TFT) luminance is better than that of NS5-SQ series by about 110 cd/m<sup>2</sup>.

\*2. Contact your nearest OMRON representative to replace the backlight.

\*3. This is the estimated time before brightness is reduced by half at room temperature and humidity. It is not a guaranteed value. The service life will be dramatically shortened if PT is used at low temperatures. For example, using the PT at temperatures of 0°C will reduce the service life to approximately 10,000 hours (reference value).

\*4. Lot No. 15Z0 or later of NS5 models.

\*5. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors.

Backlight error detection indicates that all backlights (2) are OFF.

\*4. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors. Backlight error detection indicates that all backlights (2) are OFF.

\*5. An analog touch panel is used with the NS15. Do not press the touch panel in two or more places simultaneously.

If the touch panel is pressed in two or more places simultaneously, it may activate a switch between the points that are pressed.

Design

Note: Including models whose production were discontinued.

\*1. To connect a NS with a PLC via a RS-422A connection, OMRON's NS-AL002, or CJ1W-CIF11 RS-232C/RS-422A Converter can be used to convert the RS-232C port on the NS to RS-422A.

\*2. A NS with Ethernet port is necessary.

When connecting a PLC with the NS, an Ethernet port is necessary on the PLC, too. Use a PLC CPU Unit with a built-in Ethernet port, or add an Ethernet Unit.

**\*3.** A NS with Ethernet port is necessary.

When connecting a PLC with the NS, an EtherNet/IP port is necessary on the PLC, too. Use a PLC CPU Unit with a built-in EtherNet/IP port, or add an EtherNet/IP Unit.

\*4. Install a Controller Link Interface Unit on the NS. A Controller Link Unit is necessary for the PLC.
\*5. Mount a Serial Communications Unit on the NJ-series Controller. A NS can access only to the Controller's memory used for CJ-series unit.

\*6. When using a EtherNet/IP Unit to connect the NJ-series Controller, NJ Troubleshooter is not supported.

### **Function Comparison**

Note: Including models whose production were discontinued.

\*1. The SPMA relaying a PLC is not supported.
\*2. Only Device Monitor function is supported. Monitoring function that uses tags (variables) is not supported.
\*3. The SAP for CJ-series Special I/O Units and CPU Bus Units that can be used with NJ-series Controller is supported.
\*4. Sysmac Studio version 1.02 or higher (CX-Designer version 3.41 or higher) is required.

### **Connectable Inverters**

\*1. To connect using RS-422A/485, an RS-232C/422A converter (e.g. NS-AL002, CJ1W-CIF11) is required.
\*2. To connect using RS-485, an RS-232C/422A converter (e.g. NS-AL002, CJ1W-CIF11) is required. Up to 32 sequencers can be connected when using RS-485.
